

1. Open the **terminal** application and then use the **mkdir** command to make a directory. **EXAMPLE: mkdir Eliponga\_Vrixzandro.**
2. Use the **cd** command to change the directory and go to the newly created directory. **EXAMPLE: cd Eliponga\_Vrixzandro.**
3. Create and edit a file using the **vi editor** by typing vi followed the name of the file. **EXAMPLE: vi anime.txt**
4. Type the character **i** to enter insert mode to be able to edit the file.
5. To exit out of **insert mode**, press the **esc** key to enter the command mode then type **:w** to save the file.
6. Finally, to exit the **vi editor** press the character **a** to append text, press the **esc** key again to enter command mode then type **:q** to quit the editor.

- Confirmation message upon creating each text file

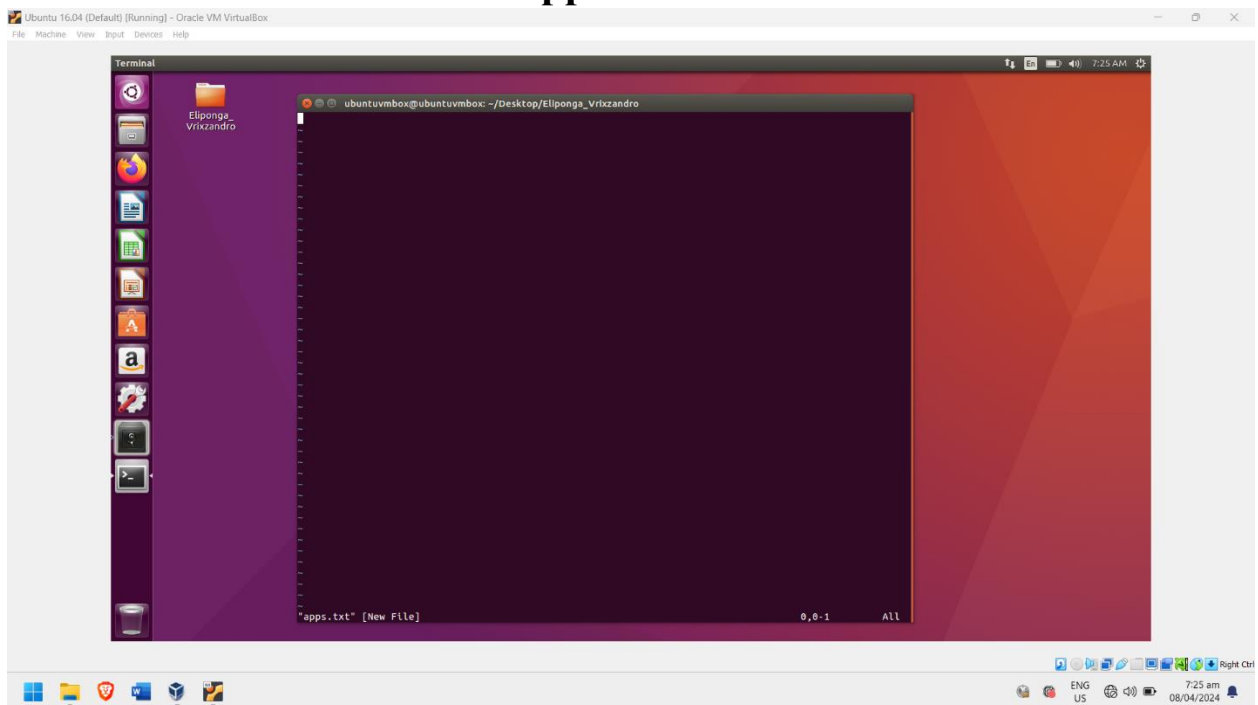

### **anime.txt** File

# flavors.txt File

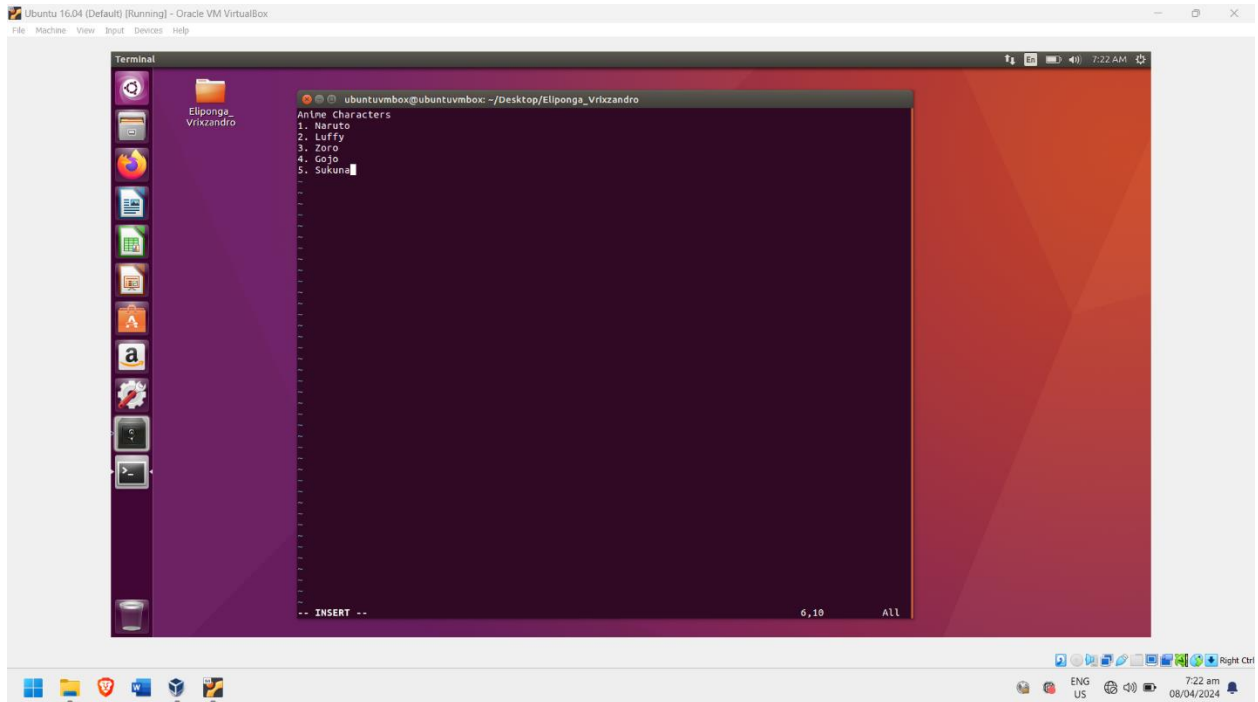

# apps.txt File

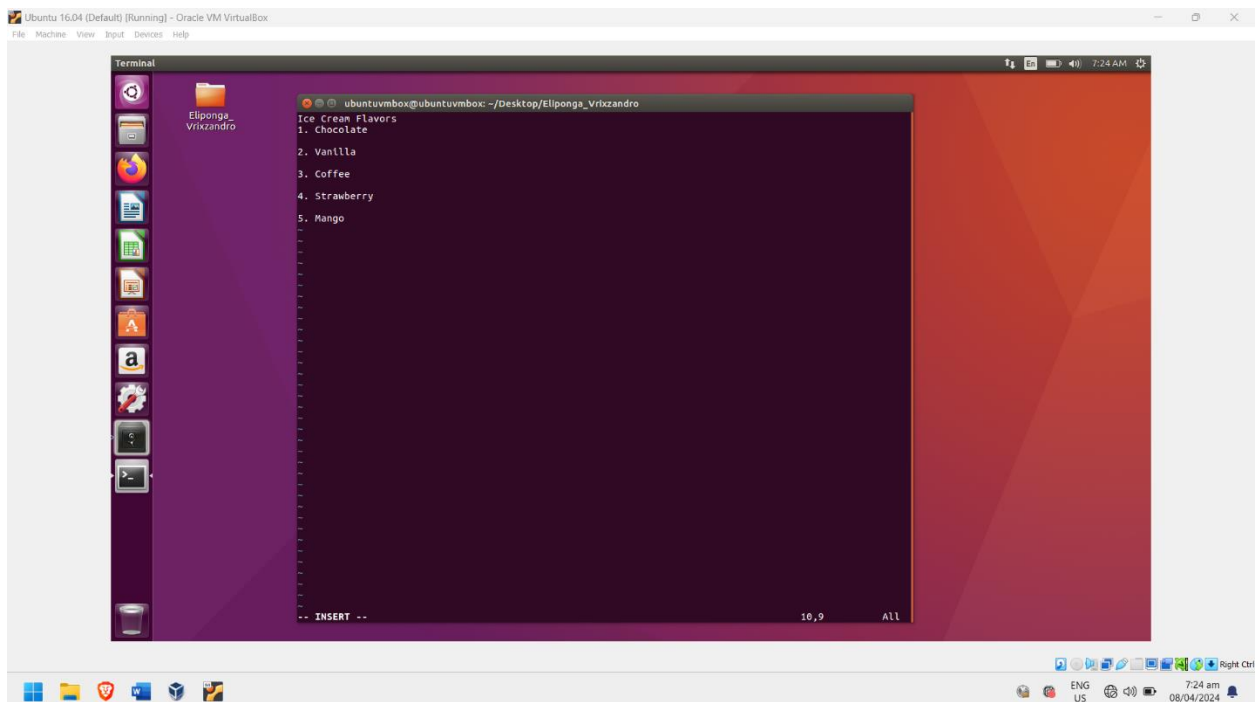

- Content of each text file

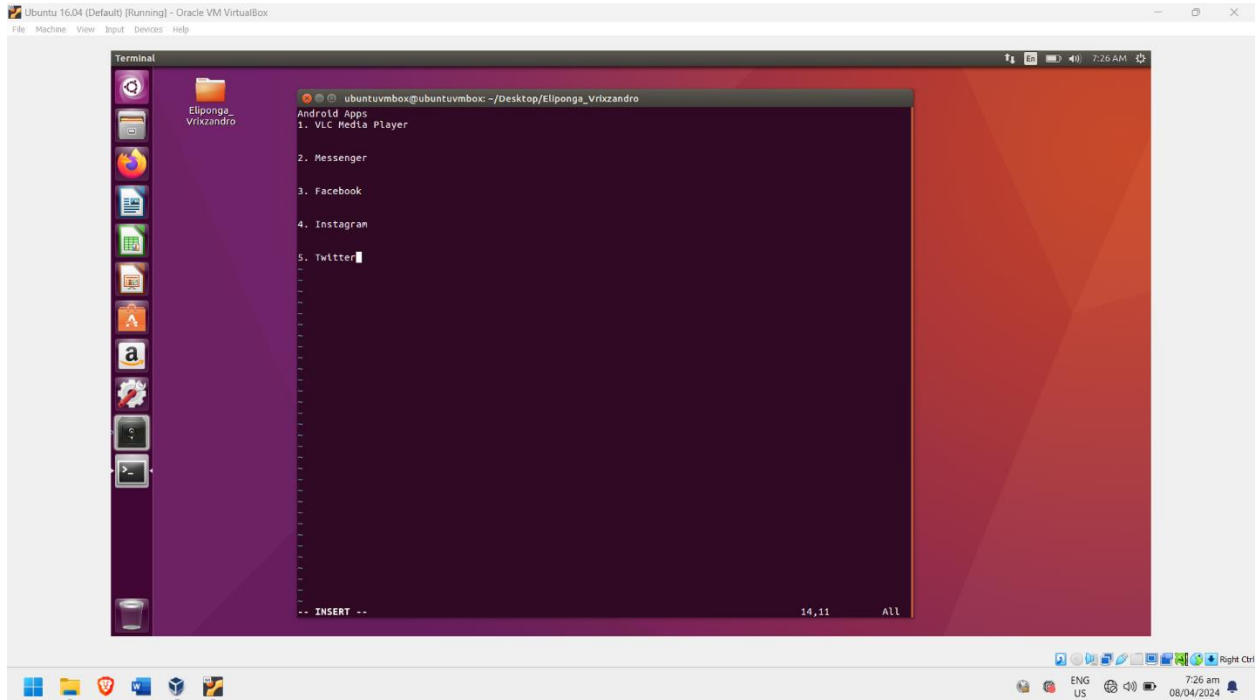

## anime.txt File

## flavors.txt File

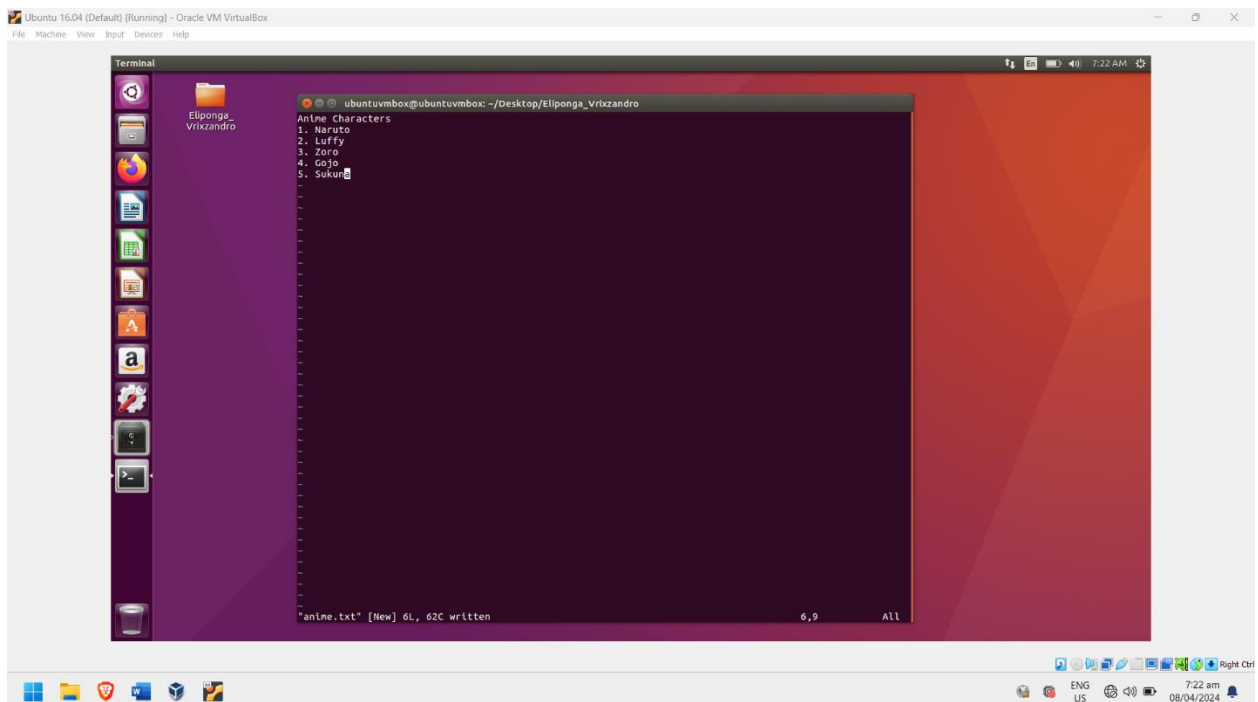

## apps.txt File

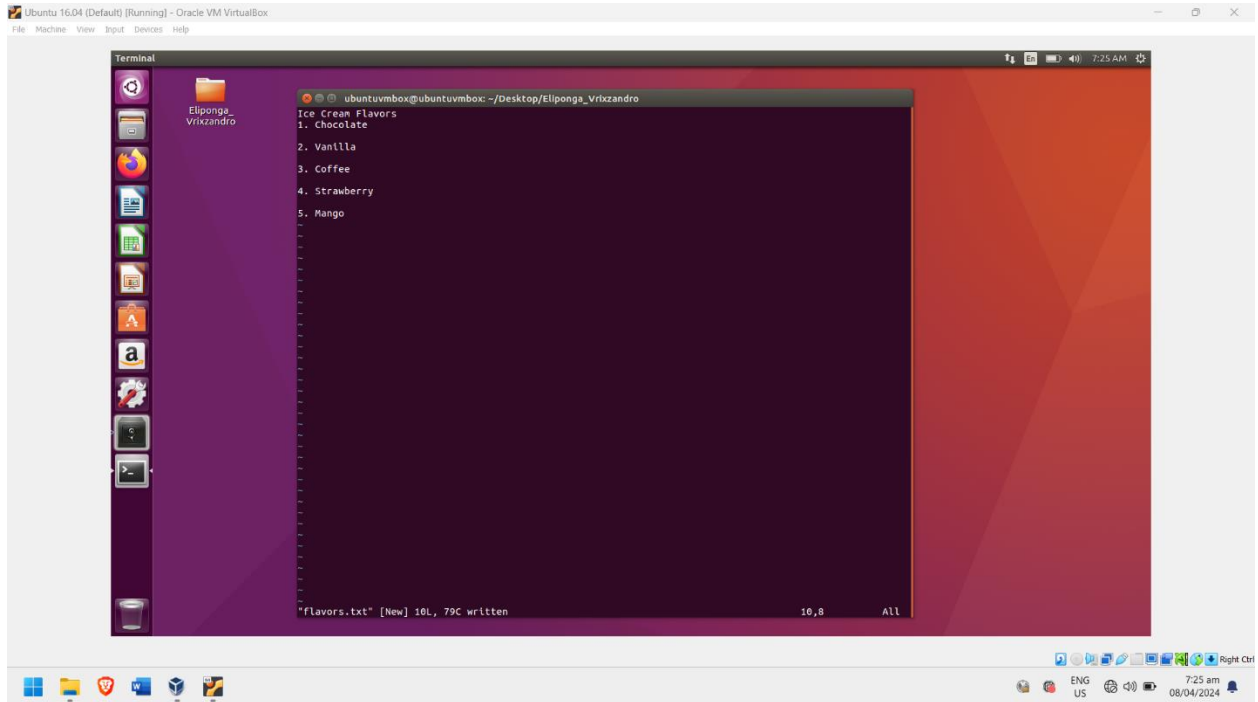

- Confirmation message upon saving each text file

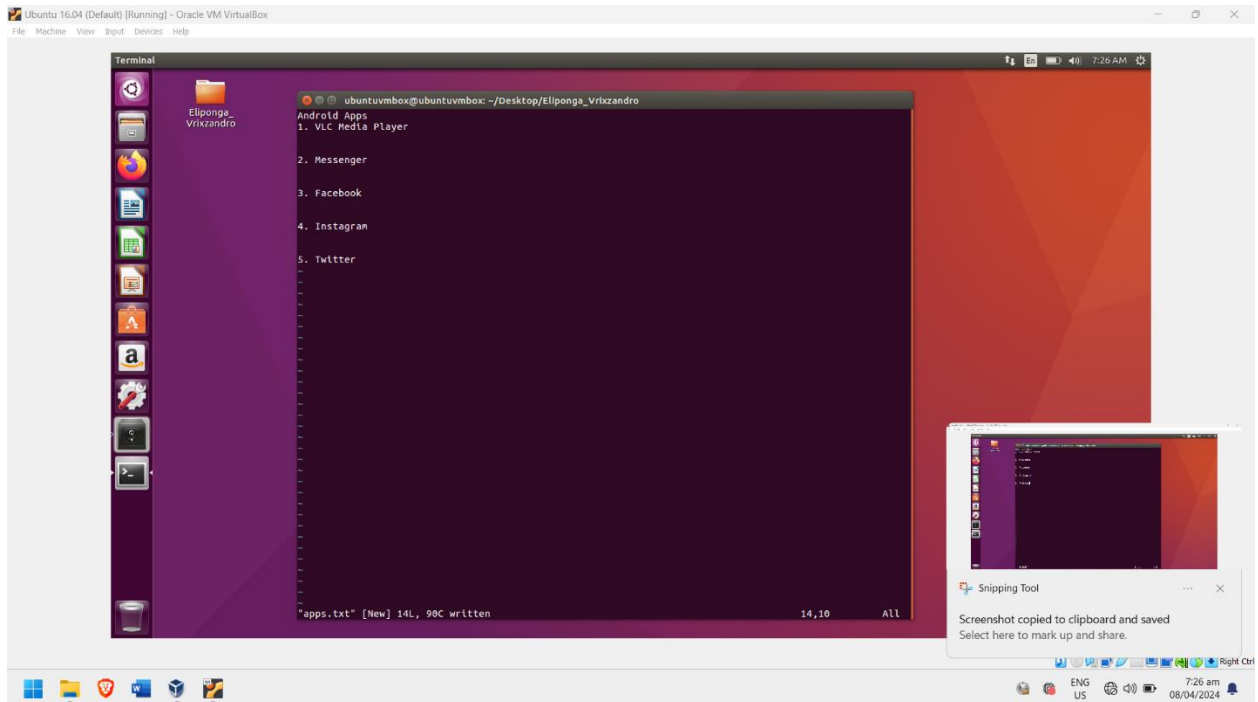

## anime.txt File

# flavors.txt File

# apps.txt File

- The created directory should consist of 3 files
  - aAnime.txt
  - flavors.txt
  - apps.txt
